

HOSTAS COLLECT RAINWATER
ON THEIR BROAD, WAXY,
LANCEOLATE OR OVATE
LEAVES AND CHANNEL IT
DOWN TO THEIR ROOTS BY
THEIR LEAF STEMS. IN
HEAVY RAINFALL SOME OF
THE WATER IS LOST DUE TO
IT FALLING OFF THE LEAF
TIPS, THIS LOST WATER
COULD POTENTIALLY BE
HARVESTED AS PART OF A
BIGGER SYSTEM
INCORPORATING OTHER
'BIG-LEAVED' PLANTS.
